Divergence Theorem

$$\iint\limits_S \boldsymbol{F} \cdot \mathbf{n}\, dS = \iiint\limits_V \nabla \cdot \boldsymbol{F}\, dV$$

Conservative Field

$$\int \boldsymbol{F} \cdot d\boldsymbol{r} \text{ is path independent, } \oint \boldsymbol{F} \cdot d\boldsymbol{r} = 0$$

2. A scaler function φ exists such that $\boldsymbol{F} = \nabla g$.

$$\boldsymbol{F} \cdot d\boldsymbol{r} = \nabla g \cdot d\boldsymbol{r} = dg$$

Directional Derivative

Total Derivative

The total derivative of $\boldsymbol{f} : \mathbb{R}^n \to \mathbb{R}^m$ at $\boldsymbol{c}$ is $\boldsymbol{T_c}(\boldsymbol{v})$ where

$$\begin{aligned} \boldsymbol{f}(\boldsymbol{c} + \boldsymbol{v}) = \boldsymbol{f}(\boldsymbol{c}) + \boldsymbol{T_c}(\boldsymbol{v}) + \|\boldsymbol{v}\|\boldsymbol{E_c}(\boldsymbol{v}) \\ \text{and } \boldsymbol{E_c}(\boldsymbol{v}) \to \boldsymbol{0} \text{ as } \boldsymbol{v} \to \boldsymbol{0} \end{aligned}$$

$\boldsymbol{f}$ differentaible at $\boldsymbol{c}$ implies that $\boldsymbol{f}$ is continuous at $\boldsymbol{c}$ and the directional derivative exists in all directions.

The total derivative of $f : \mathbb{R}^2 \to \mathbb{R}^1$ at (x,y) is $\left[\frac{\partial f}{\partial x}\, \frac{\partial f}{\partial y}\right]$ where

$$\begin{aligned} f(x+h, y+k) = f(x,y) + \left[\tfrac{\partial f}{\partial x}\, \tfrac{\partial f}{\partial y}\right] \begin{bmatrix} h \\ k \end{bmatrix} + \|(h,k)\|\, E(h,k) \\ \text{and } E(h,k) \to 0 \text{ as } (h,k) \to (0,0) \end{aligned} \tag{7}$$

Note: $\left[\frac{\partial f}{\partial x}\, \frac{\partial f}{\partial y}\right] \begin{bmatrix} h \\ k \end{bmatrix} = \nabla f(x,y) \cdot (h,k)$
